EDUARDO PADRON

Data/Cloud Engineer

ACHIEVEMENTS

- Winner of the TensorFlow Microcontoller Challenge, with ML movement model for Mapping with dance Movements. Google (2021).
- Data Camp Portofolio Challenge (2023).
- 1st place UBSA Human Excellence and Social Responsibility award. Guanajuato, Mexico (2018).
- Municipal youth award of the government of the city of Guanajuato. Guanajuato, Mexico (2018).

CERTIFICATIONS/TRAINING

- English C1 TOEFL ITP
- Fabric Data Engineering Bootcamp
- Data Analysis Bootcamp
- Python Advanced Bootcamp
- Data Science Bootcamp
- Advanced Data Science Bootcamp
- Data Engineering Bootcamp
- Edx Analyzing Data with Excel
- Open Data and Civic Hacking Course
- Azure AI-900

DATA STACK

- AWS
- SQL
- Power BI
- Azure
- PySpark
- Git
- Databricks
- Excel
- ML Flow

WORK EXPERIENCE

Data Engineer

Grupo Catalyst -Traxion | September 2023 - Present

- Designed and maintained end-to-end ETL pipelines using services within Amazon Web Services to integrate data from enterprise platforms including Salesforce, SAP, and external APIs, enabling standardized datasets for analytics, dashboards, and enterprise KPI reporting.
- Implemented data transformation and validation workflows to ensure consistency and quality across heterogeneous data sources, improving reliability of datasets used for operational decision-making.
- Supported advanced analytics initiatives by assisting in the deployment of machine learning models using Amazon SageMaker, and contributed to the development of a chatbot proof-of-concept designed to improve internal data discovery and access to analytical insights.
- Conducted data analysis and quality checks on processed datasets to validate pipeline outputs and ensure alignment with enterprise reporting requirements and strategic projects.
- Documented data pipeline methodologies, transformation logic, and validation processes, enabling reproducibility and transparency of datasets used across analytics and reporting workflows.

Data Manager

City Cancer Challenge (Switzerland) | August 2021 - June 2023

- Supported international health system needs assessments by managing data collection, validation, and analysis processes across multiple cities including León, Greater Petaling, and Arequipa.
- Monitored the quality and completeness of needs assessment datasets using predefined indicators, ensuring alignment with the C/Can Responsible Data Framework.
- Integrated datasets from multiple healthcare stakeholders and databases using SQL, enabling standardized datasets for cross-city comparative analysis.
- Supported the preparation of needs assessment reports and analytical summaries, contributing data insights used to inform strategic planning for cancer care systems.
- Facilitated discussions with local stakeholders and project partners regarding data management, reporting standards, and analytical outputs.
- Ensured data completeness, accuracy, and standardization across multi-country datasets, enabling consistent reporting and comparative analysis of healthcare infrastructure gaps.
- Developed interactive dashboards and data visualizations to communicate key findings and adoption indicators related to cancer care capacity and service delivery.
- Aggregated and validated information from diverse institutional sources to generate data-driven insights supporting evidence-based decision-making.

For more information and additional documents, visit my portfolio

PATENTS

- Motorized 3/4 pressure regulating valve (Pending)

EXTRA ACTIVITIES

Future Lab

- Community member | 2017 - present (Guanajuato, Mexico) Technological community focused on scientific and technological innovation, project development, organization of events and educational initiatives.

Bricolabs

- Community member 2019 - present (A Coruña, Spain) Community focused on designing and collaborating with the Open Source movement, the ethics of DIY and the culture of development in free technologies.

WORKSHOP INSTRUCTOR

- Developed and implemented workshop for Science Clubs International to teach AI as a tool for sustainable development with Python. (Highschool students)
- Electronics with art workshop for kids at OSHWDem by Bricolabs (Spain)

VOLUNTEER EXPERIENCE

Omdena - Dryad

- September 2021 - November 2021 (U.S.) Implemented a complete pipeline for detecting forest fires applying supervised machine learning techniques. The Python pipeline included Data Analysis for Anomaly Detection, Data Quality check and Preprocessing modules, training and inference of multiple Classification models and further deployment in Docker containers.

Ploomber

- September 2023 - November 2023 (U.S.) Ploomber team guidance to develop a production-ready project using Data Engineering (ETL pipelines with SQL and Python) for Data Analysis, Storytelling, and Visualization.

IoT Engineering/ Data Scientist (Investigation Role)

Universidad de Guanajuato | January 2018 - December 2021

- Implemented an automated irrigation project with open source platforms.
- Utilized SQL, Python, and MQTT to automate and enhance data processing, visualization, and real-time analysis for an automatic irrigation system.
- Architected and implemented a platform for Data Collection to satisfy reporting, data science, and analytics needs.
- Supervised the design and development of new data warehouses.
- Created 3D printing tools and fixtures to reduce costs and enable scalability.

PREVIOUS EDUCATION

Universidad de Guanajuato

Master in Water Sciences graduated in 2021
Bachelor in Hydraulic Engineering graduated in 2018

- Technological community coordinator (2019-2020)
- Patent development (2018-2020)

Universidade da Coruña

Master research data and IT intership in 2019

CITEEC (Technological innovation center in construction and civil engineering) and CITIC (Information and communication technology research center).
- Reduced cost and time of installation through the wireless communication and design improvements of an automated gate valve.
- Utilized data collection processes, open-source technologies, and communication protocols to enhance the efficiency and effectiveness of the irrigation system.

BINATIONAL ACADEMIC PROJECTS

-Comtemporary issues in water resouces U.S - Mexico water, food energy nexus. Texas A&M University/University of Guanajuato. (2017).

-U.S.-Mexico bidirectional study abroad program in water supported by 100,000 strong in America´s. Gateway Community College/University of Guanajuato.(2017).

-2nd International workshop on hydrologic and hydrogeochemical processes in inter-montane Basins. Texas A&M University, College Station, Texas, EE. UU. (2019).
